

### What's New This Week: First Detection – June 5, 2008

A crow, found in Kane County, tested positive for West Nile virus at a private veterinary laboratory. This is the first detection of West Nile virus in Utah this year. In 2008, the state of Utah is not routinely testing horses or wild/dead birds for West Nile virus. However, the Salt Lake Valley Health Department is conducting a study on dead birds. If a dead bird is found in Salt Lake County, you may call 801-534-4572 to have it tested.
